

Quiz #19

In this problem you will ask the user if they want to provide a title for a plot. If they provide a title (as a string) you are to use that title in the plot. The plot will be created in a function called `colorplot`. IF the user supplies a title then that is the one input argument in `colorplot`. Use the following equations to create the plot.

$$x(t) = \cos(t)$$

$$y(t) = \sin(t) \left(\sin\left(\frac{t}{2}\right) \right)^m$$

Values of t should range from 0 to 200 in increments of 0.5. Let m go from 1 to 7. Note: you will need to use a `for` loop to loop through m and construct the 7 y equations. All 7 y equations will be plotted on the same figure. Let MATLAB automatically select the plot colors.
